- Implemented paywall for Apple App Store and Google Play Store.
- Implemented universal linking.

Airship CMS | Goma Games — 2015-Present

- Developed self-healing servers.
- Developed Kubernetes clusters on AWS.
- Wrote the entire modular content management system user interface in AngularJS with coffeescript, jade templating, and gulp workflow.
- Developed the authorization layer by integrating 3rd party Auth0 service.
- Developed file and image upload capability by integrating 3rd party Cloudinary service.
- Developed 3-commerce capability by integrating with 3rd party Stripe payment processing service.

Skyport | Goma Games — 2016-Present

- Wrote the entire account management user interface in Angular 4 with Typescript and web pack workflow.
- Developed the authorization layer by integrating 3rd party Auth0 service.
- Developed e-commerce capability by integrating with 3rd party Stripe payment processing service.

Jumping Jack| Node-Knockout Hackathon Winner — 2018

- Built a game that uses your microphone as input.

Beyond VT Marketing | Goma Games — 2017

- Built a client-side single-page order/checkout application with Angular and Airship's API.
- Integrated Stripe card validations.
- Built a CSV export tool with JQuery, NodeJS, Express, and MangoDB.

Hawaii International Film Festival | Goma Games — 2017

- Built the custom film browser that fetches films from FestPro API using Angular.

- Built the custom film schedule and from with jQuery and and AirshipCMS.

WiFi Probe Sniffer | Goma Games — 2017

- Wrote a python runner script that schedules the periodic synchronization of database files.
- Wrote the synchronization script using python from a Raspberry PI to an AWS S3 bucket.

Swagger UI Light | Goma Games — 2017

- Built an open source alternative to Swagger UI using InfernoJS.

Unicorns VS. Dragons | Node-Knockout Hackathon Winner — 2017

- A mobile real-time multiplayer game.
- Game built with Angular.
- Socket server built with Go.

Circa Victor | Circa Victor — 2017

- Built a micro service that retrieves data from an FTP server and uploads to an AWS S3 bucket in Go.
- Wrote and designed an activity log persisted to AWS DynamoDB.

HIC Surfboards | Goma Games — 2017

- Built a custom product browser that fetches products from Airship API using jQuery.
- Built a custom shopping cart using Angular 1.
- Built a custom checkout module using Angular 1.

Truffaux | Goma Games — 2016

- Built a custom product browser that fetches products from Airship API using Angular 1.
- Built a custom shopping cart module using Angular 1.
- Built a custom checkout module using Angular 1.

Randy Panado | Goma Games — 2016

- Built a portfolio site using content from AirshipCMS.

- Wrote a portfolio piece filter with Angular 1.
- Created a video modal with Angular 1.

EDUCATION

Devleauge — 2014-2015

Computer Science | Honolulu Community College — 2010-2013

SKILLS

- JavaScript, TypeScript, CoffeeScript
- Go, Python, Bash, C#, Lua, Ruby
- Express, Hapi
- ReactJS, React Native, InfernoJS, VueJS
- Angular, Angular 1.x, Ionic
- Sass, PostCSS, CSS3
- Handlebars, Pug
- Mocha, Chai, Jasmine
- PhaserJS, Unity, Lumberyard
- Kubernetes, Traefik, AWS
- Pentesting
